Specifications and Standards for the Ropeway

Specifications and Standards to apply

Concessionaire has to adopt MDG CEN standards for the construction of Ropeway. The Mono-Cable Gondola (1S) is a single cable, detachable grip system where the vehicles (cabins) detach and attach to the moving haul cable (wire rope) in the stations. The tensioned haul cable itself provides the guideway for the vehicles and no support track cable is required. The cableway of circulating gondolas has multiple cabins spaced equally along the line. This 1S mode provides for the narrowest system pathway operating in an envelope as narrow as 12m with code mandated lateral clearances.

To enable all passengers to be safely returned to solid ground in an emergency scenario, an innovative recovery concept needs to be also considered for developed for 1S cable cars. All functionally relevant parts and equipment should be duplicated and independent of one another. The aim of this novel development was to provide the technical and organizational means to ensure that all cabins can always be safely returned to the nearest station at the time of any type of stoppages or emergency.
